

Fly-Away Antenna System

ATCi is pleased to introduce the ATCi Fly Away Antenna System. The transportable system offers quick deployment capability for Satellite News Gathering applications. Packed in only three light weight cases, the system can be field assembled in less than a half hour.

The whole antenna system is easily transportable in two heavy duty light boxes (included).

Due to light and smart design, the antenna system can be assembled in about 10 minutes with no tools required!

Our integrated and self-contained transportable rack contains all the electronic equipment necessary to uplink and monitor your program. Complete front access makes operating the system a user friendly experience.

Using the provided electronics rack and antenna system, you can start transmitting your program over satellite from anywhere in the world in less than 30 minutes!
