

# Active Simulsat RF Transport Solution

- **Simulsat Multibeam Antenna** will view 35 satellites simultaneously
- **L-Band Fiberoptic Links** for transport into the headend
- **RF Detection** for LNB Status.
- **L-Band Matrix Switch** to route and distribute signals to receivers
- **Embedded Spectrum Analyzer** for spectrum monitoring of each signal
- **Proprietary M & C Software** that provides total monitoring capabilities of each individual signal path.

It reports the current health of each LNB, fiber transmitter and fiber receiver as well as full matrix control.
